**Intelligent power distribution panels**

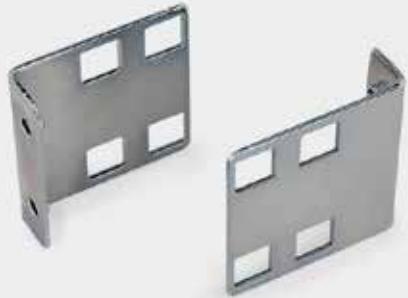

Amount and configuration of sockets, measured values and level of management is always carried out according to the customer's specification.

Please contact your business partner for more information.

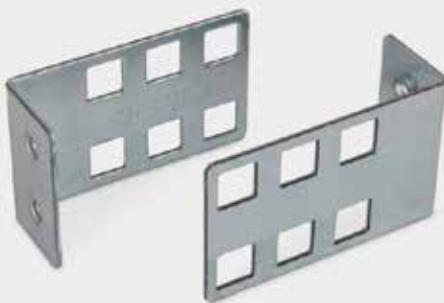

These panels are primarily designed for installation in the skeleton of RTA / RYA / RDA cabinets. Depending on the type of management, it is possible to measure and monitor various electrical values, eventually temperature, humidity, etc.

Superior versions of the panels then allow remote control of individual sockets or entire panels, messaging and other functions.

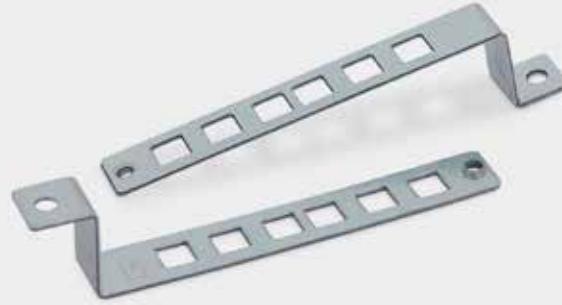

A standard communication is via IP protocol, SNMP, built-in web interface and is possible to integrate them into building management systems.
